

Table of Contents

1 Introduction	1
1.1 Plant Disease Epidemics.....	1
1.2 Some Concepts	1
1.2.1 Epidemics.....	1
1.2.2 Epidemiology	3
1.2.3 Epidemic versus epiphytotic	4
1.3 Some Historical Developments	4
1.3.1 Up to 1963.....	4
1.3.2 After 1963.....	6
1.3.3 Some conferences and books, starting in 1963.....	6
1.3.4 Final thoughts on the review of historical developments.....	8
1.4 Prelude to the Rest of the Book	8
1.5 Possible Course Outlines	10
1.6 Suggested Readings.....	10
2 Measuring Plant Diseases	11
2.1 Introduction.....	11
2.2 Plant Disease Intensity	11
2.2.1 Concepts	11
2.2.2 Severity versus incidence: some considerations.....	12
2.3 Measurement Levels and Random Variables.....	13
2.3.1 Measurement level	13
2.3.2 Random variables	14
2.3.3 Plant disease variables.....	15
2.4 Assessing Disease Intensity	16
2.4.1 Incidence, counts, and severity: some general comments.....	16
2.4.2 Visual assessment of disease severity	16
2.4.2.1 Direct estimation	16
2.4.2.2 Direct estimation with use of disease diagrams	16
2.4.2.3 Estimation with use of disease scales	17
2.4.2.4 Estimation with use of ordinal rating scales	19
2.4.2.5 Random variables for severity of disease	19
2.4.3 Remote-sensing and electronic assessment of disease severity	20
2.4.3.1 Spectral signature	20
2.4.3.2 Multispectral radiometry.....	20
2.4.3.3 Image analysis	21
2.4.4 Indirect measurement of severity.....	22
2.5 Reliability, Accuracy, Agreement	22
2.5.1 General concepts.....	22
2.5.2 Reliability.....	22
2.5.3 Accuracy	24
2.5.4 Ordinal and binary data.....	27
2.5.5 Improving disease measurements.....	28
2.6 Attributes and Properties of the Crop.....	28
2.6.1 Some useful static and dynamic properties.....	28
2.6.2 Leaf area index	30
2.7 Conclusions and Prelude to Following Chapters	31
2.8 Suggested Readings.....	31

3	Introduction to Modeling in Epidemiology	33
3.1	Introduction	33
3.2	Models	33
3.2.1	Definition and general classification	33
3.2.2	Quantitative (mathematical) models—some general concepts	34
3.2.3	Probability distributions	37
3.2.4	Is the model linear?	37
3.3	Methods of Model Development	38
3.4	Fitting of Linear Models to Data	40
3.4.1	Introduction	40
3.4.2	Least squares regression—general concepts	40
3.4.3	Distributional results	44
3.4.4	Model evaluation	45
3.4.5	Model adjustments	46
3.4.6	Other considerations	47
3.5	Fitting of Nonlinear Models to Data	48
3.5.1	General considerations	48
3.5.2	Nonlinear least squares	48
3.5.3	Linearized models	51
3.5.3.1	From nonlinear to linear	51
3.5.3.2	Model fitting	52
3.5.3.3	Where is the error additive?	52
3.5.3.4	Nonlinear or linearized statistical models?	53
3.6	Applications	53
3.6.1	Disease intensity in relation to inoculum density	53
3.6.2	The cumulative response	54
3.7	Maximum Likelihood	58
3.8	Discussion and Prelude to Later Chapters	59
3.9	Suggested Readings	61
	Appendix	61
4	Temporal Analysis I: Quantifying and Comparing Epidemics	63
4.1	Introduction	63
4.2	General Concepts	64
4.2.1	Notation and introduction to models	64
4.2.2	Disease progress curves	65
4.3	How Does an Epidemic Occur?	65
4.3.1	Contact of inoculum with the crop host	65
4.3.2	Epidemic classification	65
4.3.3	Nuances of classification of epidemics	67
4.4	Models	68
4.4.1	Exponential model	68
4.4.2	Monomolecular model	70
4.4.3	Logistic model	72
4.4.4	Some other population dynamics models	75
4.4.4.1	Gompertz model	75
4.4.4.2	Richards model	75
4.4.5	Model comparisons	77
4.4.6	Calculations with the models	78
4.5	Control	80
4.5.1	Control strategies for polycyclic diseases	80
4.5.2	Calculations for polycyclic diseases	80
4.5.3	Control for monocyclic diseases	83
4.5.4	Summary of disease control strategies	83
4.6	Model Fitting	84
4.6.1	Choosing a model	84
4.6.2	Estimating parameters and assessing model fit—linear least squares	86

4.6.3	Estimating parameters—nonlinear least squares.....	90
4.6.4	Parameter estimation—generalized linear models for disease incidence.....	91
4.7	Comparing Disease Progress Curves	92
4.7.1	Simple comparison of epidemics	92
4.7.2	Epidemics in designed experiments	97
4.7.2.1	Choosing a disease progress model.....	97
4.7.2.2	Fitting one or more disease progress models	100
4.7.2.3	Comparing models with different error (residual) variance-covariance structures	102
4.7.2.4	Summary of model fitting and comparisons	104
4.7.2.5	General repeated measures analysis	104
4.7.2.6	Area under the disease progress curve	106
4.7.2.7	Some other approaches.....	108
4.8	Models with Maximum Disease Intensity as a Parameter.....	109
4.8.1	General concepts	109
4.8.2	Choosing a model	112
4.8.3	Parameter estimation.....	112
4.9	Time-Varying Rate Term.....	113
4.10	Concluding Comments and Prelude to Advanced Topics.....	115
4.11	Suggested Readings.....	116
5	Temporal Analysis II: The Components of Disease.....	117
5.1	Introduction.....	117
5.1.1	Terminology	118
5.2	Disease Progress Models with Fixed Host Density	119
5.2.1	A simple discrete-time model	119
5.2.1.1	Model derivation	119
5.2.1.2	Model simulation	120
5.2.1.3	The threshold for epidemic development.....	121
5.2.1.4	Initial disease increase	122
5.2.1.5	Final disease level	123
5.2.1.6	Concluding remarks	123
5.2.2	The H-I-R epidemic model.....	124
5.2.2.1	Model derivation	125
5.2.2.2	Model simulations	126
5.2.2.3	The threshold for epidemic development.....	127
5.2.2.4	Initial disease increase	128
5.2.2.5	Final disease level	128
5.2.2.6	Concluding remarks	128
5.2.3	The H-L-I-R epidemic model	129
5.2.3.1	Model derivation	130
5.2.3.2	Model simulations	131
5.2.3.3	The threshold for epidemic development.....	131
5.2.3.4	Initial disease increase	132
5.2.3.5	Final disease level	134
5.2.3.6	Some concluding remarks.....	135
5.2.3.7	Recapitulation of the model equations—role of latent and infectious periods.....	135
5.2.4	The Vanderplank model.....	136
5.2.4.1	Model derivation.....	136
5.2.4.2	The threshold for epidemic development.....	137
5.2.4.3	Initial disease increase	137
5.2.4.4	Final disease level	138
5.2.4.5	Concluding remarks	138
5.2.5	The Kermack and McKendrick model.....	138
5.2.5.1	The sporulation curve.....	139
5.2.5.2	Model derivation	139
5.2.5.3	The exponential growth rate and derived R_0	140
5.2.5.4	The exponential growth rate for sporulation curve 5.50	141

5.2.5.5	Final disease level	141
5.2.5.6	Concluding remarks	141
5.3	Discussion.....	142
5.4	Suggested Readings.....	143
6	Temporal Analysis III: Advanced Topics	145
6.1	Introduction.....	145
6.2	Models with Crop Growth	145
6.2.1	Continuous crop growth	146
6.2.1.1	Model derivation	146
6.2.1.2	Model simulations	147
6.2.1.3	The removed category	147
6.2.1.4	Steady states and thresholds for epidemic development.....	148
6.2.1.5	Initial disease increase	149
6.2.1.6	Threshold of epidemic development of model equations 6.5	150
6.2.1.7	Concluding remarks	150
6.2.2	Seasonal cropping	151
6.2.2.1	Model derivation	151
6.2.2.2	Model simulations	152
6.2.2.3	Threshold for epidemic development.....	152
6.2.2.4	Concluding remarks	153
6.3	The Role of Primary Infection	154
6.3.1	Model derivation.....	155
6.3.2	Model simulations.....	156
6.3.3	Discussion	157
6.4	Epidemics with Vector Transmission	158
6.4.1	Model derivation.....	159
6.4.2	Model simulations.....	161
6.4.3	Steady states and thresholds for epidemic development	162
6.4.4	Some notes on disease management	163
6.4.5	Concluding remarks	165
6.5	Transitional Dynamics and Other Complexities	165
6.5.1	Models considered so far	165
6.5.2	More complicated models	167
6.5.3	Computer simulation modeling?	168
6.5.4	Stochasticity	168
6.6	Parameter Estimation.....	169
6.6.1	Estimating parameters without direct curve fitting.....	169
6.6.2	Fitting models to data	170
6.7	Suggested Readings.....	171
7	Spatial Aspects of Epidemics—I: Pathogen Dispersal and Disease Gradients	173
7.1	Introduction.....	173
7.2	Dispersal Gradients, Disease Gradients, and Disease Spread	174
7.2.1	Concepts	174
7.2.2	Inoculum sources	176
7.3	Models.....	177
7.3.1	Exponential	177
7.3.2	Power model	178
7.3.3	Power versus exponential model	180
7.3.4	Contact distributions.....	181
7.3.5	Some other dispersal models	182
7.3.6	Some calculations.....	184
7.4	Model Fitting.....	184
7.4.1	Choosing a model	184
7.4.2	Estimating parameters—linear methods	186
7.4.3	Estimating parameters—nonlinear methods	189

7.5	Disease Gradients—Correcting for Maximum Intensity	190
7.5.1	Simple adjustment	191
7.5.2	Generalizations of the exponential and power models	191
7.5.3	Other models	194
7.5.4	Model fitting	194
7.5.4.1	General comments	194
7.5.4.2	Example—graphical evaluation	195
7.5.4.3	Example—linear regression	195
7.5.4.4	Example—comparing parameter estimates	196
7.6	Spatio-Temporal Dynamics of Disease Spread	199
7.6.1	General comments	199
7.6.2	Two spatio-temporal models	200
7.6.3	$\partial s/\partial t$	202
7.6.3.1	Isopaths	202
7.6.3.2	Two models	203
7.6.4	Other models	205
7.6.5	Analysis	206
7.7	Disease Management	208
7.8	Concluding Comments and a Prelude to the Following Chapters	208
7.9	Selected Readings	209
8	Spatial Aspects of Epidemics—II: A Theory of Spatio-Temporal Disease Dynamics	211
8.1	Introduction	211
8.1.1	Large scale spread: the case of potato late blight	211
8.1.2	Small scale, focus expansion	212
8.1.3	Common features of spatial disease expansion	212
8.2	Models for Spatial Population Expansion	214
8.2.1	Introduction	214
8.2.2	Model derivation	214
8.2.3	Rates of expansion in relation to contact distributions	215
8.2.3.1	Gaussian contact distribution	217
8.2.3.2	Double exponential contact distribution	219
8.2.3.3	Root contact distribution	220
8.2.3.4	Modified power law contact distribution	220
8.2.4	Comparisons	221
8.3	Some Extensions	222
8.3.1	One dimensional versus two dimensional epidemic expansion	222
8.3.2	Continuous time and more realistic temporal dynamics	223
8.3.2.1	Model and simulations	223
8.3.2.2	Disease expansion rates—traveling waves	225
8.3.2.3	Disease expansion rates—dispersive traveling waves	227
8.3.2.4	Multi-seasonal epidemic expansion	227
8.3.3	Disease expansion with monocyclic diseases	227
8.3.4	Multiple foci and temporal dynamics	229
8.4	An Application	231
8.5	Concluding Remarks	232
8.6	Selected Readings	233
9	Spatial Aspects of Epidemics—III: Patterns of Plant Disease	235
9.1	Why We Look at Spatial Patterns	235
9.2	Terminology	236
9.3	Spatial Plant Disease Data	236
9.3.1	Data collection	237
9.4	Analysis of Sparsely Sampled Incidence Data	238
9.4.1	Summary statistics	238
9.4.2	The binomial distribution	238

9.4.3	The index of dispersion.....	239
9.4.4	Intra-cluster correlation	241
9.4.5	The β -binomial distribution.....	241
9.4.6	The index of dispersion revisited	244
9.4.7	A power law relationship between variances	244
9.4.8	How the power law is related to statistical probability distributions.....	245
9.4.9	Unequal size sampling units.....	247
9.4.10	Two-stage sampling.....	248
9.5	Analysis of Sparsely Sampled Count Data	248
9.5.1	Summary statistics	248
9.5.2	The Poisson distribution	249
9.5.3	The negative binomial distribution	249
9.5.4	The index of dispersion for counts.....	250
9.5.5	Taylor's power law.....	251
9.6	Relationships between Distributions.....	252
9.7	Spatial Hierarchies.....	252
9.7.1	Disease incidence in a spatial hierarchy	253
9.7.2	Counts in a spatial hierarchy	253
9.8	Sparsely Sampled Disease Severity Data	255
9.8.1	The severity-incidence relationship—regression models	255
9.8.2	The severity-incidence relationship—a mathematical model	257
9.8.3	Another regression model	258
9.8.4	Overview of the severity-incidence relationship	258
9.9	Analysis of Intensively Mapped Disease Data.....	258
9.9.1	Join-count statistics.....	260
9.9.2	The cross-product statistic	262
9.9.3	Spatial autocorrelation.....	263
9.9.4	Semivariance	266
9.9.5	Spatial analysis by distance indices	267
9.10	Spatial Patterns and Dispersal Functions	270
9.10.1	Simulation models.....	270
9.10.2	Inference of dispersal from pattern using stochastic models.....	271
9.11	Distance-Based Methods.....	274
9.11.1	Events and intervals.....	274
9.11.2	Neighbors	275
9.11.3	The $K(\text{distance})$ function.....	275
9.12	Conclusions	277
9.13	Suggested Readings.....	278
10	Estimating Plant Disease by Sampling.....	279
10.1	Why We Sample for Epidemiological Data	279
10.2	Sampling Preliminaries.....	279
10.2.1	Terminology	279
10.2.2	Sample size.....	279
10.2.3	Sample design.....	280
10.2.4	Variability	281
10.2.5	Population size	281
10.2.6	Reliability of the estimated sample mean	282
10.3	Simple Random Sampling for Disease Incidence Data	282
10.3.1	Sample size calculations	283
10.3.2	Inspection errors	284
10.3.3	Exact binomial confidence intervals	284
10.4	Simple Random Sampling for Count Data	286
10.4.1	The Poisson distribution	286
10.4.2	The negative binomial distribution.....	286
10.4.3	Taylor's power law.....	287

10.4.4	Sample size calculations	287
10.4.5	Exact Poisson confidence intervals	289
10.5	Cluster Sampling for Disease Incidence Data	290
10.5.1	The binomial distribution	290
10.5.2	The β -binomial distribution	291
10.5.3	The power law	292
10.5.4	Sample size calculations	292
10.5.5	Exact confidence intervals for cluster-sampling data	294
10.6	Regression Analysis of Disease Incidence Data	295
10.6.1	Logistic regression.....	296
10.6.2	β -Binomial regression.....	298
10.6.3	Logistic regression with deff-transformed data	300
10.6.4	Fitting statistical probability distributions.....	301
10.7	Regression Analysis of Count Data.....	302
10.7.1	Poisson and negative binomial regression	302
10.8	Group Testing with Incidence Data.....	303
10.8.1	The estimator \tilde{p}_{low}	303
10.8.2	Choice of group size.....	304
10.8.3	Sample size calculations	306
10.8.4	Exact confidence intervals.....	306
10.8.5	Group testing using generalized linear models	306
10.9	Binomial Sampling for Count Data.....	307
10.9.1	Binomial sampling based on probability distributions.....	307
10.9.2	Binomial sampling based on empirical models.....	308
10.10	Estimation of Disease Severity.....	309
10.11	Inverse Sampling for Disease Incidence	310
10.11.1	How many positives?	310
10.11.2	Exact confidence intervals.....	311
10.11.3	The geometric series	311
10.12	Sequential Estimation of Disease.....	312
10.12.1	Sequential estimation of disease incidence from simple random sampling.....	313
10.12.2	Sequential estimation for count data	314
10.12.3	Sequential estimation of disease incidence from cluster sampling.....	315
10.13	Conclusions	317
10.14	Suggested Readings	318
11	Decision Making in the Practice of Plant Disease Management.....	319
11.1	Decision Making in Disease Management.....	319
11.2	Acceptance Sampling Preliminaries	319
11.2.1	Probability and likelihood.....	320
11.2.2	Thresholds	320
11.2.3	The operating characteristic curve.....	320
11.2.4	The binomial distribution	321
11.2.5	The hypergeometric distribution	323
11.2.6	Inspection errors in simple random sampling.....	324
11.3	Designing a Sampling Plan with a Specified Curve	324
11.3.1	Plans based on the producer's and consumer's risks.....	325
11.3.2	Plans based on the indifference quality level	325
11.3.3	Finding a sampling plan by iteration.....	327
11.4	Zero Acceptance Number Sampling Plans	328
11.4.1	The operating characteristic curve.....	329
11.4.2	Sample size calculations	329
11.4.3	The mailroom problem	330
11.5	Sequential Sampling for Classification	331
11.5.1	Sequential classification with simple random sampling data	331
11.5.2	Sequential classification with cluster sampling data	335
11.5.3	The need for simulation	336

11.6	Risk Algorithms as a Basis for Decision Making	338
11.6.1	Risk factors	338
11.6.2	Risk algorithms	339
11.6.3	The receiver operating characteristic curve	342
11.6.4	Sensitivity and specificity as conditional probabilities	345
11.6.5	Likelihood ratios	345
11.7	Predicting the Need for Treatment	346
11.7.1	Bayes' theorem	346
11.7.2	Predicting unusual events is problematic	348
11.8	Conclusions	349
11.9	Suggested Readings	351
12	Epidemics and Crop Yield	353
12.1	Introduction	353
12.2	Definitions and Concepts	354
12.2.1	Yield	354
12.2.2	Impacts of disease on crops	355
12.3	Data and Relationships	356
12.3.1	Graphs of yield and disease	356
12.3.2	Obtaining data from a range of epidemics	357
12.3.3	Experimental and sampling units	358
12.3.3.1	Planned experiments	358
12.3.3.2	Surveys	358
12.3.4	Yield per unit area	359
12.3.5	Expert opinion	359
12.4	Modeling Yield in Relation to Disease	360
12.4.1	Notation and general concepts	360
12.4.2	Single point models	360
12.4.2.1	Linear models	360
12.4.2.2	Nonlinear models	362
12.4.2.3	Model fitting	364
12.4.3	Some considerations regarding the response and predictor variables in single-point (and other) models	365
12.4.4	Multiple-point models	366
12.4.5	Integral models	367
12.4.6	Other predictor variables in empirical models	368
12.5	An Example Analysis	369
12.6	Mechanistic Approaches to Crop Loss Assessment	373
12.6.1	General considerations based on crop physiology	373
12.6.2	Radiation interception and yield	374
12.6.3	Characterizing crop losses in relation to HAA and RUE	376
12.6.4	Virtual lesions	378
12.6.5	Type I and Type II curves	379
12.6.6	Time of infection	381
12.6.7	Discussion	383
12.7	Spatial Heterogeneity	384
12.7.1	General concepts	384
12.7.2	Models	384
12.7.3	An approximation (but a good one)	385
12.8	Discussion and Conclusions	387
12.9	Suggested Readings	388
